

About Oil Skimmers

*The Oil Skimmer is placed at the desired location.
The oil will stick to the band, and will be removed from the bath to a container.*

If you need the oil to be removed to an external place, please see our Spillomatic Automatic Spill Container

What is an Oil Skimmer?

An Oil Skimmer is the cheapest and most efficient way to remove unwanted surface oils in process baths, chemical baths, alcalic washing machines and leakage oils from coolants in tool machinery etc..

Please look at the top illustration to see how our oil skimmers work.

Why should I purchase an Oil Skimmer?

There are many good reasons to why you should purchase an oil skimmer. First of all it is the cheapest way to remove undesired oils.

Furthermore it is a very simple machinery, giving many years good work with hardly any running costs.

Most important is that a clean coolant without bacteria will make your tools and machines last much longer, and thereby save you unnessecairy costs. It is a well known fenonomen that dirty coolants causes infections. Your machine operators will avoid getting these bactarial rashes and skin infections when working with clean coolant.

For optimal performance of your oil skimmer, it is very important that you use the correct band lenght. Please look at our brochure for band length calculation.
