

## Refractometer for automotive use

Test your antifreeze fluid, windscreen washer fluid and battery fluids. All 3 scales are in same refractometer. All you have to do is add a few drops, of the fluid to be tested, to the prism. Example of the scale is shown in the pictures below.

**This is why you should purchase this refractometer;**

- Antifreeze fluid measurement
- Windscreen washer fluid measurement
- Battery fluid measurement
- Very accurate
- Easy to use
- Is delivered in a solid box.
- Double joint ensures that the cover plate fits exactly on the main prism.
- You can use this instrument in normal lightning. Many others require bright sunlight to work well.
- ATC (Automatic temperature compensation)

### Technical Features

#### Measurement ranges;

**Antifreeze fluid** 0~ -50°

**Windscreen washer fluid** 0~ -40°

**Battery fluid** 1,00~1,40 kg/l

**Dimensions and weight:** 27 x 40 x 150 mm & 175 gr.

In cold winters it is important the antifreeze fluid in your vehicle has the right concentration of antifreeze and water – otherwise your vehicle radiator can freeze and thereby break. With our auto refractometer, you can easily measure the concentration. With this refractometer you can also measure your windscreen washer fluid freezing point and battery acid. A refractometer is a cheap, easy and effective way to do these measurements.

All you have to do is to add a few drops of liquid to the main prism. Close the cover plate and ensure that the fluid covers the entire prism area. Point the refractometer towards a light source and instantly you will be able to accurately read the value. Isn't that simple and easy?.

Before using the refractometer, we advise to read the instruction.

We sell a wide range of other refractometers too, so if you need refractometers for other purposes, we can help you find the one for your exact needs. For more information, please visit our website or contact us.
