

Brake fluid testing - DOT 4 & DOT 4 PLUS (SUPER)

This handheld refractometer measures the boiling point of brake fluids. Add a few drops of liquid on the prism and you can instantly read the value.

This is why you should purchase this refractometer;

- *Very Accurate and easy to use*
- *Test your braking fluids*
- *Is delivered in a solid box.*
- *Double joint ensures that the cover plate fits exactly on the main prism.*
- *You can use this instrument in normal lightning. Many others require bright sunlight to work well.*

Technical Features

Measurement range	1-6% Water / Boiling Point of brakefluid (centigrade)
Accuracy:	+/- 0,5 %
Dimensions:	40 x 40 x 220 mm
Weight:	350 gr.

It is important that there is no water in your brake fluid system. When water enters the system, the boiling point of your brake fluid is reduced dramatically, and this will cause your brakes to fail. This scenario has caused many accidents, and it is therefore extremely important to test your brake fluid at least once a year. With this refractometer you can easy test, the boiling point of your brake fluid, and at the same time see the water content there might be (show in percent).

All you have to do is to add a few drops of liquid to the main prism. Close the cover plate and ensure that the fluid covers the entire prism area. Point the refractometer towards a light source and instantly you will be able to accurately read the value.

Before using the refractometer, please read the instruction, for right calibration and storage.

We sell a wide range of other refractometers too, so if you need refractometers for other purposes, we can help you find the one for your exact needs. For more information, please visit our website or contact us.
